

Towards EU climate neutrality

Progress, policy gaps and opportunities

List of Figures and Tables

Assessment Report 2024

Contents

List of figures 5

List of tables 8

List of figures

Figure 1 Overview of the Advisory Board’s recommendations	8
Figure 2 Scope of the progress and policy consistency assessment.....	15
Figure 3 Structure of the Advisory Board conclusions.....	17
Figure 4 Overall progress towards the EU’s 2030 and 2050 objectives since 2005	19
Figure 5 Illustration of the assessment framework based on its application to the transport sector.....	33
Figure 6 Illustration of indicators (white boxes) for tracking progress based on their application to the transport sector	34
Figure 7 Indicator O1 – overall progress towards the EU’s 2030 and 2050 GHG emission reduction objectives	40
Figure 8 Sectoral GHG emissions in 2005 and 2022	42
Figure 9 Indicator O2 - progress in reducing primary and final energy consumption	43
Figure 10 indicator O3 - EU gross inland energy consumption.....	44
Figure 11 Indicator E1 – overall progress in reducing GHG emissions in the energy supply sector	47
Figure 12 Assessment framework for the energy supply sector.....	53
Figure 13 Indicator E1 – overall progress in reducing GHG emissions in the energy supply sector	54
Figure 14 Indicator E2 – shares of fossil-based and renewable energy sources (excluding biomass) in the total electricity mix	57
Figure 15 Indicator E3 – average intensity of greenhouse gas emissions from electricity grids	58
Figure 16 Indicator E4a – annual solar PV capacity additions	62
Figure 17 Indicators E4b and E4c – annual wind electricity capacity additions	63
Figure 18 Indicator E5 – electrification rate (share of electricity in final energy use)	68
Figure 19 Indicator E6 – energy-related methane emissions.....	72
Figure 20 Indicator I1 – overall progress in reducing industrial GHG emissions	81
Figure 21 Industrial GHG emissions in 2021 per subsector (Mt CO ₂ e and % of total).....	84
Figure 22 Assessment framework for the industry sector	86
Figure 23 Indicator I1 – overall progress in reducing industrial GHG emissions.	87
Figure 24 Indicator I2 – production, use and trade balance of steel, cement and base organic chemicals	89
Figure 25 Indicator I3 – circular material use rate in the EU.....	90
Figure 26 Indicator I4 – GHG intensity of steel, cement and base organic chemicals in the EU.....	93
Figure 27 Indicator I5 – final industrial energy use	93
Figure 28 Indicator I6 – relative shares of fossil fuels, renewables and electricity in industrial final energy use (excluding non-energy use)	94
Figure 29 Indicator I7a – low-carbon projects in the steel sector by technology group and project scale	95
Figure 30 Indicator I7b – number of low-carbon projects in the cement sector by technology group and project scale.....	95
Figure 31 Indicator I7c – number of low-carbon projects in the chemicals sector by technology group and status.....	96
Figure 32 Indicator T1 – overall progress in reducing transport GHG emissions	102
Figure 33 Assessment framework for the transport sector.....	108
Figure 34 Indicator T1 – overall progress in reducing transport GHG emissions (including international aviation, excluding international maritime).....	109
Figure 35 Indicator T2a – passenger transport demand.....	110
Figure 36 Indicator T2b – total freight transport demand	111

Figure 37 Indicator T3a – share of road transport in total motorised inland transport (excluding aviation and maritime, excluding active transport modes).....	112
Figure 38 Indicator T3b – intra-EU passenger transport by air	113
Figure 39 Indicator T3c – passenger transport by high-speed rail, and freight transport by rail and IWW	114
Figure 40 Indicator T4 – average GHG intensity of new passenger cars and vans (g CO ₂ /km).....	117
Figure 41 Indicator T5a – share of ZEVs in new registrations of passenger cars and vans	117
Figure 42 Indicator T5b – total number of zero-emission lorries in the total EU fleet	118
Figure 43 Indicator T6a – share of fossil fuels in transport energy use (including international bunker fuels).....	122
Figure 44 Indicator T6b – use of first-generation biofuels in the transport sector	122
Figure 45 Indicator B1 – overall progress in reducing GHG emissions from the EU tertiary and residential buildings.....	128
Figure 46 Assessment framework for the buildings sector	133
Figure 47 Indicator B1 – overall progress in reducing GHG emissions from the EU buildings sector	134
Figure 48 Indicator B2 – final energy consumption in the residential and tertiary sectors	135
Figure 49 Indicator B3 – residential annual renovation rate and depth	137
Figure 50 Indicator B4 – population and surface area of homes and businesses.....	140
Figure 51 Indicator B5a – energy mix in the residential sector	142
Figure 52 Indicator B5b – energy mix in the tertiary sector	143
Figure 53 Indicator B6 – stock of heat pumps (million units) compared with REPowerEU objective.....	144
Figure 54 Indicator A1 – overall progress in reduction of agricultural non-CO ₂ emissions	153
Figure 55 Assessment framework for the agricultural sector.....	159
Figure 56 Indicator A1 – overall progress in reduction of agricultural non-CO ₂ emissions.....	160
Figure 57 Indicator A2 – livestock products: total production and GHG emissions (left axis), and GHG emission intensity (right axis).....	169
Figure 58 Indicator A3 – total fertiliser use (left axis) and nitrogen use efficiency (right axis) in the EU agriculture sector	170
Figure 59 Indicator A4 – total production and consumption of livestock products (left axis) and herd sizes (right axis).....	172
Figure 60 Indicator A5 – average animal product consumption	174
Figure 61 Indicator A6 – food waste in the EU in 2020, per source (left) and compared to the 2030 benchmark (right)	177
Figure 62 Indicator A7 – use of agricultural products as bioenergy feedstocks	178
Figure 63 Indicator L1 – overall progress in reducing emissions (positive values) and increasing removals (negative values) in the LULUCF sector	181
Figure 64 Assessment framework for the LULUCF sector.....	188
Figure 65 Indicator L1 – overall progress in reducing emissions (positive values) and increasing removals (negative values) in the LULUCF sector	189
Figure 66 Indicator L2 – change in surface area per land use category (2021 compared with 2005)	190
Figure 67 Indicators L3 and L4 – afforestation and deforestation in the EU.....	190
Figure 68 Indicator L5 – annual increase in settlement area (as proxy for net land take)	191
Figure 69 Indicator L6 – changes in the forest carbon sink	194
Figure 70 Overview of drivers affecting the forest carbon sink and carbon stock	195
Figure 71 Indicator L7 – net GHG emissions in non-forest land use categories	196
Figure 72 Indicator L8 – bioenergy use	199
Figure 73 Supply (shown as positive values) and demand (shown as negative values) for woody biomass.....	200

Figure 74 Scope of EU-wide carbon-pricing mechanisms (% of 2021 EU-wide GHG emissions and removals).....225

Figure 75 Euro area inflation and its main components, October 2013 to October 2023 (%)230

Figure 76 Mean equivalised disposable income and share of social transfers231

Figure 77 Historical versus required climate-related energy investments.....243

Figure 78 Changes in fossil fuel subsidies in the EU244

Figure 79 Eligibility of different sectors’ revenues and capital expenditure under EU taxonomy.....252

Figure 80 Development of the EU green bond market253

Figure 81 Gross domestic expenditure on research and development, 2010–2021.....259

Figure 82 EU-27 R & D spending in the public and private sectors259

Figure 83 Share of climate patents among all EU filings and the global market share of the EU in climate-related patents260

Figure 84 Public spending on RD & D by sector.....262

Figure 85 Available public funding by stage of the RD & D process.....263

Figure 86 Investments in cleantech across Europe and the United States (% of GDP).....264

Figure 87 Technology advantages of global innovation centres.....265

List of tables

- Table 1 Categories of progress 36
- Table 2 Scope of the policy consistency assessment 38
- Table 3 Summary overview of progress on the adoption of climate-relevant policies 45
- Table 4 Progress summary – energy supply 79
- Table 5 Policy consistency summary - energy supply..... 80
- Table 6 Progress summary - industry100
- Table 7 Policy consistency summary - industry101
- Table 8 Progress summary - transport.....126
- Table 9 Policy consistency summary - transport.....127
- Table 10 Progress summary - buildings151
- Table 11 Policy consistency summary - buildings152
- Table 12 Progress summary - agriculture179
- Table 13 Policy consistency summary – agriculture.....180
- Table 14 Progress summary - LULUCF206
- Table 15 Policy consistency summary – LULUCF.....207
- Table 16 Policy consistency summary – pricing emissions and rewarding removals227
- Table 17 Policy consistency summary – whole-of-society approach.....235
- Table 18 Overview of the scopes of the different data sources used for assessing investment needs .242
- Table 19 Policy consistency summary – finance and investments254
- Table 20 Policy consistency summary – Innovation.....266
